Toppers by **SUZO HAPP**

Topper Solutions

Put the finishing touch on your slot machine. Toppers, also known as Marquees, are available in a variety of shapes and sizes.

Standard topper power is connected directly to the existing game cabinet power supply (12-volt DC).

Most toppers are available with chrome or gold bezel finish. Lighting options include white LED, chase lighting, or CCFL. Contact your ECP representative for full specification details.

When mounting to a non-ECP top box, we can create a custom mounting design or work from an existing design to ensure proper fitting to the cabinet.

Custom Solutions

Bring excitement to the slot floor and draw players from across the room with favorite theme characters and custom topper designs. The ECP team has years of specialized experience with custom-themed toppers. We work with clients from beginning design phases to final production, managing the project's progress every step of the way.
